DETAILED ACTION

This Office action is responsive to communication received 09/17/2008 – Request for Continued Examination (RCE) and Amendment.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

The following changes have been made in the specification and the abstract in order to correct the spelling of certain terms to reflect the more common American spelling most often found in United States Patents. Further changes have been made to eliminate grammatical inconsistencies. Moreover, certain numerical values on pages 8-10 of the specification, which were originally presented with commas, have been amended to reflect the more proper use of a decimal point or period. Although these changes were not discussed with applicant's attorney, the need for said changes is self-evident.

IN THE SPECIFICATION:

Page 1 – line 6, "millimetres" has been CHANGED to --millimeters--;

Page 1 – line 7, "metres" has been CHANGED to --meters--;

Page 2 – line 1, "centre" has been CHANGED to --center-- ;

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

Claims 28-33 are allowable over the prior art references of record in view of the arguments advanced by the applicant's attorney on scanned page 2, lines 8-21 of the REMARKS, received 09/17/2008. Moreover, while some of the newly cited prior art references disclose a shaft of uniform weight, none of the newly cited prior art references of record show, suggest or otherwise render obvious the combination of a golf putter with a shaft consisting of an elongated member having a weight uniformly distributed along its length, wherein a head and a grip are attached thereto and further wherein the moment of inertia of the head is related to the combined mass moment of inertia of the head and shaft when the pivot axis of the putter is located a specified distance from the longitudinal axis of the head, as specifically set forth in independent claim 28.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Further References of Interest

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hunter and Minami show shaft having uniform weight throughout. Stuff and Everett show balanced shaft designs. Hedrick shows a shaft having a supplemental weight for balancing.
